SUBJECT INDEX

Aggretion—
  effect of—
    air-drying, 154
    microorganisms, 273
    roots, 275
  influence of molecules, 159
  seasonal variability of Hagerstown, 151–168
  types, 297
Alfalfa—
  effect of liming on yield of, 255–266
  yields, 257
Anemia in cattle, relation to soil type, composition, 383–392
Atmosphere, composition of air in experiments, 117
Azotobacter numbers, 345
Bacteria—
  aerobic, 348
  anaerobic, 350
Bentonite, release of fixed potassium, 414
Biography—
  Wheeler, 267–269
  Winogradsky, 197–226
Books, *see* end of letter B
Boron—
  content of—
    organic nitrogen carriers, 147
    potatoes, 337
    tobacco, 143
  deficiency symptoms, 46
  in tobacco fertilization, 137–149
  relative contents of soils, 43–51

Ziegler, C. M. Field Manual of Soil Engineering, Revised, 194
Calcium—
content of tobacco, 143
released by hydrogen ions, 397
replaceable in soils, 146
Carbon-nitrogen ratio, effect of cropping, 360
Cellulose, aerobic decomposing bacteria, 348
Citrus chlorosis—
foliage symptoms, 478
in calcareous soil, 477–491
Cobalt, acid-soluble content of soils, 385–386
Colloidal clay—
control of fertility, 30
cultures, preparation and use, 23–31
rate of production, 27
stability, 28
standardization of suspensions, 27
titration of nutrients on, 29
Colloids, separation, 24
Copper content of soils, 385–386
Cropping, intensified, method to diagnose deficiencies, 43–51
Deficiencies, intensive cropping method to diagnose, 43–51
Density, factor in wilting percentage, 451–456
Drainage tension—
air space, 379
effect on water content, 379
pressure potential conditions during, 371
Electrodialysis of—
clay, 24–26
sericite, 418
Environment, control in experiments, 109–119
Erosion, function of irrigating stream and slope, 233–242
Evacuation, influence on percolation ratio and wetting, 243–254
Exchange bases—
Hidalgo fine sandy loam, 457–467
mineral soil, 171
Experiment designs—
factorial, 93
greenhouse, for statistical analysis, 87–98
incomplete block, 90
replications, 94–96
variations in, 87
Fertilization—
effect of nitrogen on productivity, 283
rates of phosphorus applications, 37
Gravel cultures, construction, 79
Hydrochloric acid extracts, composition as affected by soil properties, 393–409
Humidity, control in plant experiments, 118
Iron content of soils, 385–386
Kaolinite—
changes produced by dry grinding, 319–336
dehydration, 328
differential thermal analyses of, 331
electron photomicrographs, 326–327
exchange capacity of, 324
exchangeable bases in, 322
x-ray patterns, 321
Laterites—
analysis, Siamese, 423–440
definition of, 433
Light control in plant experiments, 114
Liming—
depth, effect on yields of alfalfa, 259
rates, 38
Lysimeter drainage under controlled moisture tension, 365–382
Methods—
aggregation, soil, 153
analysis of nutrient solutions, 84
control of photoperiod, 104–105
Mitscherlich, *see* Mitscherlich method
Neubauer, *see* Neubauer method
photoperiod control, 104
pot for soil cultures, 33–42
separation of colloidal clay, 24
silt content of irrigation waters, 235
Mitscherlich method—
equipment for, tests, 52
interpretations of, 57
modified, for soil cultures, 51–60
plants for, tests, 52
Moisture—
absorption, technique of study, 441–450
capillary rise, 170, 174, 177
content and specific gravity, 454
Mulch, influence on soil aggregation, 159
Neubauer method—
application to research, 64, 68
modified, for soil cultures, 61–70
Nitrates, oxidation in soils—
effects of pH on, 129
mechanism of, 127
rates, 122
Nitrogen—
carbon ratios, 288
content of—
grapefruit foliage, 485
soils, 286, 355, 460
nitrate content of tobacco leaves, 147

Nutrient balance of soil, 140–141
Organic matter—
  levels in soil, 283–291
  organic carbon content, dry-farm soil, 355
Oxalates, oxidation in soils, 121–136
Oxidation—
  effects of—
    light and dark on, 121
    sterilization on, 125
  rates of nitrates in soils, 122
Percolation—
  influence of—
    evacuation, 248
    time, 245
  rates, influence of hydraulic heads, 244–245
  through natural lump of soil, 248
Phosphate—
  available, changes, 200
  content of soils, 355, 385–386
  fixation, and mechanism, 293–306
Photoperiod—
  factor, in choice of plants for testing soil deficiencies, 99–107
  growth regulation by control of, 101
  method and equipment for control of, 104
Plants—
  environmental factors, 109–119
  for testing soil deficiencies, 99–107
  growing in sand cultures, 3–22
  grown in colloidal clay cultures, 23–31
Porosity, effect of exchangeable bases on, 169–181
Potassium—
  content of tobacco, 143
  fixation in relation to exchange capacity, 411–420
  release of fixed, 411–420
Pressure potentials, relation to soil moisture, 374
Rhizosphere—
  age of plants, effect on, 346
  effect of mangels, 343–354
Roots—
  absorption, nutrients and water, 441–450
  distribution of alfalfa, 262
Sand cultures—
  equipment, 4
  growing plants in, 3–22
  large-scale, 74
  nutrient solution—
    application in, 15
    choice for, 11
    reservoir for, 7
  plant material, 9
Sand cultures—(*continued*)
  vessel, 5
Seepage rates, influence of drainage tension on, 369
Siltpan subsoils—
  chemical characteristics, 313
  occurrence, nature, and land-use in West Virginia, 307–317
  physical properties, 309
Soilless culture—
  apparatus for, 71–73
  large-scale for plant research, 71–86
  types, 71
Soil science, modern concepts, 469–476
Soil selection for pot cultures, 37
Soil series, analyses, descriptions of, or experiments with—
  Antigo, 337; Archer, 385; Arredondo, 385; Bale, 451; Beaumont, 458; Bladen, 385; Blanton, 385; Brennan, 458; Chualar, 442; Chungking, 227; Cookport, 309; Collington, 394, 413, 416; Davie, 385; Dunellen, 412, 416; Durham, 394 Eulonia, 385; Gila, 271; Gilpin, 255; Hagerstown, 151, 249; Harlingen, 458; Harrisburg, 458; Hernando, 385; Hidalgo, 457; Holland, 367, 452; Houston, 458; Indio, 481; Immokalee, 385; Kialingkiang, 227; Lakewood, 385; Leon, 385, 430; Litz, 249; Madera, 453; Matmon, 385; Merrimac, 138; Miami, 337; Monongahela, 309; Norfolk, 385; Nipe, 432; Palouse, 283; Pickaway, 309; Portsmouth, 385; Putnam, 24, 28, 394; Ruston, 385; Sierra, 367; St. Johns, 386; Tsinyunszu, 227; Tucumcari, 271; Victoria, 458; Vilas, 337; White Store, 394; Yolo, 453
Soybeans, uptake of calcium, magnesium, potassium, 399
Structure, genesis in calcareous soils, 271–281
Surface, internal, mineral soil, 171
Temperature control in plant experiments, 115
Tobacco, uptake of calcium, magnesium, potassium, 395
Water table, equipotentials, and streamlines in drained land, 183–192
Wheat yields—
  as affected by—
    depth, 227–231
    nitrogen, 285
    organic residues, 285
  on dry-farm soil, 355
